

MEDICAL DEVICE PURPOSE

Device for buoyancy aid.

SAR-TFA is the floating aid kit to be used in combination with the TYRAH AR and the N-E-XT for the recovery of an injured patient in the aquatic environment also by lifting (Tyrah AR).

The SAR-TFA was created to help the floating and recovery of patients from aquatic environments, guaranteeing all the handling precautions typically applied to traumatized patients.

The SAR-TFA allows floating aid (50N) and prevents the patient's head from lean down. Through the special evacuation triangle (Tyrah AR) on which the kit is installed, an immobilized patient can be transported using the N-E-XT, lifting it.

TECHNICAL STANDARDS

- **Buoyancy aid:** 50N
- **Weight:** 700 g
- **Width:** 120 cm

Material used:

- Floating structure: PL + PVC Foam
- Belts: Nylon 6.6
